

Simple Expense Tracker (Console App)

Synopsis:

The Simple Expense Tracker is a console-based Python application designed to help users manage their personal expenses in a structured and user-friendly manner. It allows users to record, view, and calculate the total of their expenses with ease.

Key Features:

1. **Add Expense:** Users can input the amount spent, categorize the expense (e.g., Food, Travel, Other), and add a descriptive note.
2. **View Expenses:** Displays a list of all recorded expenses in a clear, formatted manner, showing the amount, category, and note for each entry.
3. **View Total:** Calculates and displays the total sum of all recorded expenses.
4. **Exit:** Allows the user to exit the program safely.

Technical Details:

- **Language:** Python
- **Data Structure:** Uses a list of dictionaries to store expense data.
- **Input Validation:** Ensures that the amount entered is numeric.
- **User Interface:** Console-based menu with numbered options and clear prompts.

Potential Enhancements:

- **Category validation** to restrict input to predefined categories.
- **Persistent storage** using JSON files to save and load expenses.
- **Sorting and filtering options** to organize expenses by date, category, or amount.
- **Adding timestamps** for each expense to track spending history over time.

Overall, this program provides a simple yet effective way to track and manage daily expenses, making it suitable for personal finance management and learning basic Python programming concepts.
